

## HydRO®

---

HydRO® stands for VERIDE's product line and involves water treatment related devices. These devices are always characterized by:

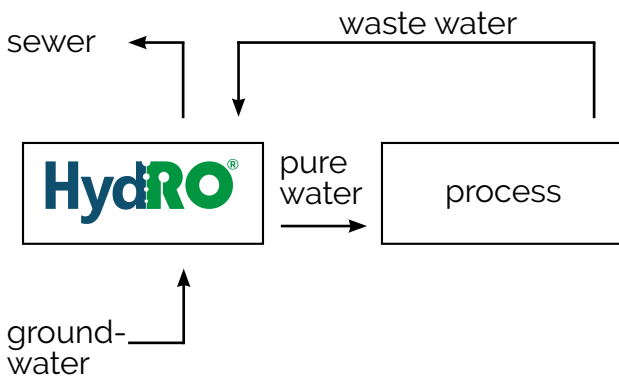

- Qualitative materials
- Standardised or costum made
- Completely automated
- Remote control
- Corrosion resistant using high quality stainless steel
- Minimal sound and odor

HydRO® are the compact and high performance water purification systems developed by Veride bvba. These systems are fully automated and are offered in a mobile edition on demand. With HydRO, we focus mainly on medium-sized companies and this in all industrial sectors such as laundry services, cosmetics, food and beverages, slaughterhouses.

## HydRO Concept

No more clutter of separate water treatment systems in your company. The classic sequential series of de-ironing, softening, filtering, buffering, disinfection, boiler water treatment, heat recovery systems ... and finally sewage treatment are now combined in a single system.

Our combination of MBR-RO offered as a plug & play water purification unit delivers the highest quality process water for your company, all departing from your wastewater, in combination with ground- and city-water.

Applications are boiler water, rinsing and washing water, food and non-food production waters, ...

### Strength:

- Plug & play
- Mobile
- Completely automated
- Remote control
- Scalable to 150 m<sup>3</sup>/d and more
